USER TIPS

GETTING STARTED

4. Take 3, two-second draws to prime the heating coil with oil.
5. Draw for 3-4 seconds or until desired effects are reached.
6. Repeat and enjoy.

PRIMING

To get the best experience, prime the device by taking 3 slow draws during first use. This allows the oil to absorb into the chamber for superior flavor. Failure to set up the device correctly can result in permanent damage to the heating element. When the device is not used for extended periods, repeat priming process again.

DOSING CONSIDERATIONS

Although rapid-acting Apocalypse Liquid Diamonds are often felt instantly, it may take up to 15 minutes to feel the full effect. Therefore, we recommend waiting at least 15 minutes before administering an additional dose. Effects will vary between individuals and product strains.

The size of an inhalation will also impact the effect.

MICRO DOSING

For less experienced and first-time users, we highly recommend a starting dose of 3-5 seconds of inhalation. More experienced users may require a few doses to achieve their desired effects.

FREQUENTLY ASKED QUESTIONS

How do I know when my oil is finished?

During product testing we have found a 1.0ml lasts between 160 to 200 three second draws. In addition, our All-Glass tank allows you to see completely the level of Liquid Diamonds Oil in your device.

Note: Usage and rate of inhalation will vary.

No vapor but LED still turns on.

Our All-In-Ones feature a 330mAh battery that is designed to outlast the oil to ensure a consistent experience from first to last draw. If your device still has oil in the tank but no vapor is produced, even though the light turns on when inhaling, try charging your device and follow the instructions in page 5 (PRIMING).

Why is my device producing little to no vapor?

Most devices for cannabis products are designed to deliver a smooth vaporization that doesn't exceed the recommended amount of dose. If you would like to increase the volume, slightly cover the charging port to reduce the air intake, this will generate more vapor. **Note:** Do not cover the charging port completely, doing so prevents the air intake.

My device is not working, can I return it?

Please see our Returns and Exchange policy on page 10.

How do I unclog my device?

If your device becomes clogged, gently blow into the bottom end of the device to vaporize excess oil.

Note: This may cause oil spitting if conducted often.

CARING FOR YOUR DEVICE

CAUTION

Due to our high-powered CTEC 2.0 coil, the device will become extremely hot during excessive use and can cause clogging, leaking and/or permanent damage to the heating element.

- Please dose in intervals of 30–60 seconds.
- Soft and short draws are recommended.
- If device becomes too hot, please allow 2–3 minutes for device to cool.

Handle with Care

Dropping the device on a hard surface can result in shattering the glass housing tank.

Storage and Maintenance

Place in a secure location always.

- Store device in cool and low light conditions with original packaging.
- Do not remove mouthpiece.
- Do not drop, damage, or tamper with device.
- Do not shake vigorously.
- Chain vaping may cause overheating, malfunction, and/or burns or injury.

CARING INSTRUCTIONS 09

- Do not expose to extreme pressure changes.
- Always store device in temperatures between 60°F and 78°F.
- Avoid direct sunlight, such as in a car on a hot, sunny day.

SUPPORT

We offer comprehensive exchange policies with all our partnered retailers. Please return your defective Apocalypse product and packaging to the shop you purchased from in order to request a replacement at no cost. Please note that many shops require original packaging and receipt, as well as more than half the oil inside the cartridge to honor an exchange. If a retailer fails to accept your defective product, please contact our Support Team immediately to begin processing a special request from another verified retailer near you.
